

COSTA RICA Trip Update

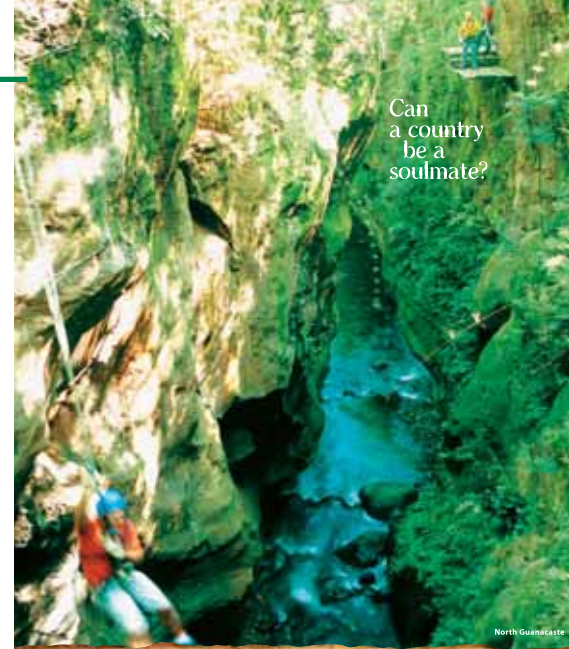

CONTRACTOR REWARDS PROGRAM

Trip Details

We are moving forward with plans for our Costa Rica Trip in February 2008! We will be spending 5 nights at the Paradisus Playa Conchal Resort in the Guanacaste province located in the North Pacific Coast region of Costa Rica. We will also be offering many exciting activities that are not available anywhere else in the world. Whether you are shooting through the jungle on a zip line, visiting the local village town or watching the amazing view of a volcano erupting against the night sky, it will truly be an extraordinary trip to remember. We will continue to release more information about the trip as we make additional plans.

PRE-REGISTRATION

Many of you have already taken advantage of the opportunity to pre-register for this exotic adventure. If you would like to guarantee yourself a place on the trip while not fully committing to it this early, make sure to ask your local Stovall representative for a pre-registration form, or you can go online at www.stovallinc.com and download the form today. Complete the form, fax it in and we will be happy to hold a spot for you. If circumstances change, you can still choose to cancel at a later date with no penalty. We expect this trip to fill, so make sure you don't miss out on this once in a lifetime experience!

“SMART” IRRIGATION SYSTEMS

The Irrigation Association® has named July *Smart Irrigation Month* to provide tips about smart practices and new technology to keep irrigation systems operating at peak efficiency all year long. There are many things you can do as contractors to promote efficient use of outdoor watering. Informing homeowners of the benefits of “smart”

irrigation systems can benefit both contractor and homeowner. The Irrigation Association has contributed tips to help educate end-users about these types of systems. The article below can help contractors explain the benefits to the general consumer.

SMART IRRIGATION SYSTEMS: A “GREENER” IDEA

If you're a typical homeowner, you probably put your automatic sprinkler system into the same category as your home's heating and cooling system. You expect it to work reliably and efficiently with minimum fuss. The latest technology offers just that—and more.

A sprinkler system is one area of your home where a little knowledge can go a long way to conserve water while maintaining a healthy yard that's the envy of the neighborhood.

In conjunction with *Smart Irrigation Month* in July, the Irrigation Association® is offering information about efficient irrigation technology and tips. Since it's a peak month for water usage, July is a good time to learn more about making the most of water resources.

The new generation of “smart” sprinkler systems can be viewed as sophisticated communications systems that happen to dispense water, rather than a network of underground valves, pipes and pop-ups controlled by a wall-mounted timer.

Thanks to advances in electronics and communications, sprinkler systems can monitor data, such as climate, site conditions, or soil moisture, and automatically adjust your sprinkler's

watering schedule. Smart systems keep your grass green while saving your “green.”

The secret to smart systems is the controller. Smart controllers use either weather and/or site data to automatically determine when and how long to water. Then your sprinklers apply just enough water at exactly the right time in each zone of your yard.

Here are highlights of the substantial benefits that smart controllers offer:

Saves Water

Environmentally friendly smart systems conserve water by watering only as much as needed. Smart sprinklers work with Mother Nature to automatically suspend watering during rain, freezing or high wind conditions or compensate for rainfall. Plus a smart system can keep your lawn and landscape healthier by avoiding the pitfalls of inadequate watering, too frequent watering, or the more common problem of overwatering, which often results in disease or poor root systems.

Saves Money

Because smart systems water only when needed, time the applications to allow water to soak-in, and avoid application when water might evaporate

or blow away, you may reduce your annual water bill as much as 30 percent. On top of that, you may qualify for rebates from your local water board or utility for the purchase of specific smart controllers.

Saves Time

Once your irrigation installer has programmed the site data into the smart system, the controller adjusts the watering schedule based upon local conditions and/or soil moisture and by zone. This “set and forget” technology is perfect for frequent travelers and ideal for vacations or second homes used only part of the year.

Adds Convenience

Smart controllers require little direct access, so they provide an excellent solution for sites where it is difficult to access the controller. There's no need to reprogram the controller due to seasonal weather changes.

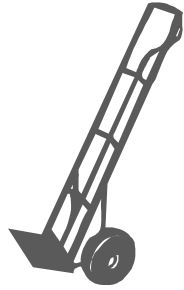

Upgrading your current controller may be an option. Some new components are designed as easy add-ons to an existing controller, eliminating the need to replace your system's “brains.”

So keep the green where it belongs—on your lawn and in your wallet—with a smart irrigation system.

PROMOTING SMART IRRIGATION PRACTICES CAN HELP CONTRACTORS

- Position your company as an expert in water-saving products and practices
- Display initiative in reducing outdoor water consumption through increased professionalism
- Increase customer loyalty by educating clients about tips for saving water, and money, with their irrigation system and in the landscape
- Offer products and services for clients that can
 - reduce water and energy consumption
 - reduce water and energy costs
 - offer convenient features that will make operation easier
 - save valuable time
- Retain long-term customers who value your expertise and performance
